## DRINKING WATER QUALITY DATA

## Mount Yokine

The Water Corporation regularly monitors the quality of all drinking water supplies to ensure that water supplied to consumers is both safe and pleasant to drink.

The report below shows the range of analysis results for water sampled from the distribution system over the past two years.

As water sources are developed or operational changes are made, variations in water quality are always possible. Therefore, this report should only be regarded as an indication of the water quality that would be expected in this area.

	Typical Range		1987 HHMRE/AWRE
	Kinman	<b>AB</b> INTON	Guitteline Value
Hq	7.6	7.9	6.5 - 8.5
Conductivity (mS/m)	70	110	None
Colour (HU)	<1	2	15
Turbidity (NTU)	<0.1	0.4	5
Sodium	105	140	300
Potassium	6	8	None
Calcium	25	35	None
Magnesium	8	10	None
Hardness as CaCO <sub>3</sub>	100	130	500
Chloride	150	215	400
Sulphate	30	40	400
Alkalinity as CaCO <sub>3</sub>	110	140	None
Nitrate + Nitrite as N	0.30	0.60	10
Iron	0.015	0.135	0.300
Manganese	<0.002	0.008	0.100
Aluminium	0.020	0.040	0.200
Silica as SiO <sub>2</sub>	13	16	None
Total Filterable solids (by sum)	470	580	1000

Total Filterable Solids

High Levels impact the taste of water

Alkalinity

Of interest to pool owners and aquarists

Turbidity

High levels cause cloudiness in water

Iron and Manganese

Excessive levels contribute to brown staining, discolouration, and 'dirty

water' problems

Colour

Due to contact with vegetation in the catchment

Hardness

High levels can cause scaling on heating elements and difficulty in

producing lather

Fluoride

Added to water as required by State Government legislation at

concentrations of 0.7 - 1.0 mg/L

The program also includes toxic metals, synthetic organic compounds and microbiological monitoring, the results of which comply with the requirements of the 1987 NHMRRC/AWRC Guidelines for Drinking Water in Australia.

Units are mg/L unless otherwise indicated, except pH which has no units
