

Nuclear War and Power Plant Accidents

We are always under the threat of nuclear war or EMP but did you know that Michigan is surrounded by Nuclear plants?

<http://www.nrc.gov/info-finder/reactors/>
There is quite a few plants in Wisconsin that if something were to happen Western Michigan could be in trouble. Here is a wind map that can show you the air currents that could carry fallout to Michigan <http://hint.fm/wind/> The health department issues Potassium Iodate KIO3 to help protect your thyroid from radioactive iodine to those that live or work near a nuclear power plant only. Others have to buy it to be able to protect their family. We will learn how to prepare, react to and decontaminate from radioactive fallout.

We will learn about EMP and Coronal Mass Ejection/Solar Flares. They can and will destroy modern electronics. We will discuss ways to protect your electronics.

Who We Are

About Us

We are people just like you and your neighbors. Veterans, blue collar workers, we are the elderly, middle aged and the young. We are people that care about the safety and welfare of their families and community.

Contact Us

Please email to confirm dates and locations and be notified for future training events

Email: CadillacPrepares@yahoo.com

First meeting is planned for May 20th
2pm @ Big Boy Restaurant on the South side of Cadillac.

All attendees will be given a large electronic library on a DVD disk as a free gift.

Meet ups
every 3rd
Saturday
@2pm

Cadillac, MI 49601

CADILLAC PREPARES

COMMUNITY GROUP

We are an informal, peer led group teaching emergency preparedness, homesteading, bushcraft, medical care and what ever else we want.

Do you have car or house insurance? Why not safety and family welfare insurance?

If you lost power in the middle of a storm and it turned into a three week ordeal, would you be able to heat your home, cook your food or keep your food from spoiling?

How long would you last before your food ran out because of an emergency and the stores could not resupply? There have also been many instances where a family had to rely on their food stores because of an illness or a job loss causing financial strain.

<http://www.michigan.gov/michiganprepares>
Michigan labels its natural threats as disease outbreaks, earthquakes, extreme heat, floods, thunderstorms, tornadoes, wildfires and winter weather. What is not labeled is economic/social breakdown or nuclear incidents/accidents but some of it is covered on the FEMA website www.ready.gov.

Informal peer led training is being organized for anyone who may have an interest about natural and man made disasters. Subjects like air, shelter, water, food, medical and security with the addition of a few other subjects like homesteading, bushcraft, nuclear biological and chemical precautions and alternative power like generators or solar will be discussed.

Meetings will initially take place at the Cadillac Big Boy restaurant every third Saturday of the month from 2-4pm starting May 20, 2017.

Most meetings will take place at Big Boy in the meeting room but if the weather is nice we may utilize a shelter in the city park or a location on nearby state or federal land.

Anyone will be welcome to give a class. Class material must be accurate and instructors will have to provide sources of subject matter. We will learn from our strengths and weakness together. Group members will be in control of what direction it wants to go in like class content, meeting dates and times.

One of the goals of having the Cadillac Prepares group is for community members to come together and have the ability to network and hopefully develop friendships. How well do you know your neighbor? This is about community.

One of the benefits of basic preparedness is that if an emergency happens first responders be providing services to those that need it. You and your family will have less of a reliance on outside help.

Medical Training and Care

If you had a medical emergency like a chainsaw accident or a child choking, would you know basic first aid or basic trauma care?

We will learn basic first aid like how to evaluate a casualty, bandaging, splinting a fracture, burns, treating for shock, CPR/Rescue breathing, trauma care, field sanitation and preventive measures, pandemic precautions, isolation and sick rooms. I mention this part of the training because of its importance. Yeah food and water are more important but basic precautions will prevent many diseases. The scientist say we are over due for a pandemic but do you know basic safety precautions or

how to properly sanitize yourself. What about setting up a sick room?
