Sheet1

| Abbr. | Term | Description | Formulas |
| :---: | :--- | :--- | :--- |
| DP | Diametral Pitch | the number of gear teeth per inch of <br> pitch diameter | $\mathrm{DP}=\mathrm{N} / \mathrm{PD}$ |
| M | Module | the number of millimeters of pitch <br> diameter per gear tooth | $\mathrm{M}=\mathrm{PD} / \mathrm{N}$ |
| PD | Pitch Diameter | diameter of the pitch circle | $\mathrm{PD}=\mathrm{N} / \mathrm{DP}$ <br> $\mathrm{PD}=\mathrm{N} * \mathrm{M}$ |
| OD | Outer Diameter | diameter of the gear blank | $\mathrm{OD}=(\mathrm{N}+2)^{*} \mathrm{M}$ <br> $\mathrm{OD}=(\mathrm{N}+2) / \mathrm{DP}$ |
| CP | Circular Pitch | the distance along the circumference <br> of the pitch circle between the <br> centers of two adjacent teeth | $\mathrm{CP}=\pi / \mathrm{DP}$ <br> $\mathrm{CP}=\mathrm{M}^{*} \pi$ |
| A | Addendum | the height of each gear tooth above <br> the pitch circle | $\mathrm{A}=1 / \mathrm{DP}$ <br> $\mathrm{A}=\mathrm{M}$ |
| C | Clearance | the gap between the tooth of one <br> gear and the root of another gear <br> when they are properly meshed | $\mathrm{C}=\mathrm{A} * .157$ (for DP $<20, \mathrm{M}>1.25)$ <br> $\mathrm{C}=\mathrm{A} * .25$ (for DP $\geq 20, \mathrm{M} \leq 1.25)$ |
| D | Dedendum | the depth of each gear tooth below <br> the pitch circle | $\mathrm{D}=\mathrm{A}+\mathrm{C}$ |
| WD | Whole Depth | the distance from the outer diameter <br> to the root diameter clearance | $\mathrm{WD}=\mathrm{A}+\mathrm{D}$ |
| T | Tooth Thickness | the distance between the flanks of <br> each gear tooth at the pitch circle | $\mathrm{T}=.5$ * CP |
