

Everything You Must Need to Know About Photo Rejuvenation

1

When it comes in picture?

If you think your skin has got effected seriously from the UVA & UVB exposure & you look too old in your own skin then we go for the skin tightening & rejuvenation treatment. Where photo rejuvenation is the most popular technique.

2

What exactly is Photo Rejuvenation?

Photo rejuvenation is a skin treatment where Intense Pulsed Light is absorbed by the pigmentation & dilated capillaries. It can be used for around 2-3 sessions to get the better results. It totally depends upon your skin texture & affected area.

3

How it helps reduce pigmentation, Rosacea, blood vessels?

IPL photo rejuvenation emits the lights of various wavelengths that are targeted to pigments, hemoglobin & blood vessels resulting into damaging them. Once this damage is done it can be absorbed into body fluid rendering them less visible.

4

Treatment time & how long it take to show results?

Treatment generally takes 30 to 90 minutes. You may have to complete the series of 3-5 treatments with the time interval of 1 month between every treatment depending upon your damage or redness in the skin.

5

What are the safety measures?

You must avoid going in the sunlight bare skin for the 15 days before & after the treatments. Also, we advise our all patients to avoid the harsh skincare products, heavy makeups before & after the treatments. Don't go to bed with the heavy makeup on.

6

Is it safe & sound treatment?

Of-course. The advanced lights in the IPL photo rejuvenation treatments have been used safely for millions of treatments worldwide. These systems are intended to target the affected areas only leaving behind the surrounding area unaffected with the treatment.
