

Hello Giant Leap Rocketry Fans!

Dix and Bob here with a quick **state of the company report** and to announce our **Black Friday and Cyber Monday Sale!**

Company Report: Giant Leap Rocketry is here to stay, and we are growing. We have been working hard to shore up the company and make it solvent, fluid and responsive to the rocket community. To that end we have negotiated with the manufacture of Slimline, Pinnacle and other Acme products to purchase their company and bring its management operations in house.

This is very good news for the hobby. Giant Leap Rocketry now owns the entire Acme manufacturing and product line. Giant Leap has purchased all of the rights, tools and inventory of Acme, giving us control of all of the Acme products from fabrication to distribution to sales. We have focused our efforts at streamlining the supply chain from manufacturing to the end user and that means we are now able to offer the entire Acme line at a discount – a thing we have never been able to do before.

SALE:

From 12:01 am Friday November 23rd to 12:00 midnight on Monday November 26th we will be offering a 15% to 30% discount on our entire Acme Product line.

Slimline is the easiest and hands down best motor retaining system on the market. Whether you prefer the classic or quick lock, the bell or tapered cone all are 15% off.

15% off All Slimline Motor Retainers and Adaptors

Threaded

Qwik-Lok

Classic

We are offering a killer deal on the Slimline Tailcones which reduce drag and friction, increase efficiency and altitude.

30% off on all Slimline Tailcone Retainers

15% off on all Acme Fincans

- **STRONG**, Practically indestructible! This allows the use of small, rapid descent chutes to bring it home from extreme altitudes.
- **SAVES TIME!** Just slide it on, epoxy it, and your almost ready to fly!
- Ideal for 54mm and 38mm **Minimum Diameter** rockets!!
- No more messy, time-consuming and frustrating fin lay-ups
- Nike-style diamond **Airfoil** to reduce drag.

15% off on all Acme super-performance ogive pinnacle nose cones

15% off on Acme Groove – Lok Fin Attachment

The Groove-LOK is the latest in fin attachment technology. It epoxies over a 38mm motor tube and makes attaching fins much more efficient. Made of high-strength extruded aluminum, it holds the fins in perfect alignment. It's a fin alignment guide build into the rocket!

15% off on all Acme low drag Conformal Rail guides and Conformal Launch Lugs

30% off Low Drag Delrin Rail Buttons

15% off on all Acme HardPoint Recovery System Anchors

Glues into the top portion of a 38mm or 54 mm motor tube. We designed the toughest, strongest attachment possible. Made of extruded aluminum, it has three thick intersecting ribs supporting a central hole for a ¼ inch eyebolt. This allows ejection gasses to easily pass through. We dare you to break it!

While we're at it we are going to give 15% off on all of our Kevlar® products.

15% TAC Bags

The TAC-Bag is a deployment bag that manages a controlled chute deployment.

15% off Fireball Zipper Stopper!

One of my favorites. There is nothing worse than a deployment that goes seemingly perfect – it looks beautiful from the ground; but when you recover your rocket the airframe is zipped. The recovery cord cut a terrible line in your airframe. That is no longer a concern with Fireball!

15% off Parachute Protectors

Kevlar® gives you 2,000 degree protection which is a higher rating than Nomax®

In addition you can take 15% off all of our Kevlar® Shock cord, Cord protectors, pre-sewn looped cords, and our Kevlar® thread.

This will be a sale not to miss. Mark your calendar and stay up late. The first 25 orders will receive a special surprise gift with their order.
